BUENAVENTURA

This report contains true and sufficient information regarding the business development of Compañía de Minas Buenaventura S.A.A. during fiscal year 2019.

Without prejudice to the issuer's liability, I, the undersigned, hereby assume responsibility for the content hereof, in accordance with the applicable laws.

Roque Eduardo Benavides Ganoza
CHAIRMAN OF THE BOARD

Lima, June 17, 2020

LETTER TO THE SHAREHOLDERS

TO OUR SHAREHOLDERS:

THE YEAR 2019 TURNED OUT TO BE AN ATYPICAL ONE FOR PERU DUE TO A SERIES OF POLITICAL EVENTS THAT SET THE NATIONAL AGENDA, WITH AN UNDISPUTABLE IMPACT ON EVERY SINGLE ECONOMIC SECTOR.

Letter to the Shareholders

GLOBAL GDP FOR 2019

GREW BY 3% ACCORDING TO THE BCRP, WHICH WAS SLIGHTLY HIGHER THAN EXPECTED.

The national economy grew at a moderate pace, demonstrating Peruvians' intention to continue down the path of development as approach the bicentennial of the country's independence.

At the international level, the tensions eased between the United States and the Asian powers of China and North Korea was reason for relief, allowing for the slow recovery of the global economy, while the outlook following the United Kingdom's exit from the European Union—Brexit—began to become clearer.

Global GDP for 2019 grew by 3%, according to the Peruvian Central Reserve Bank (BCRP, for its acronym in Spanish) which was

slightly higher than expected. This growth was driven by consumption, job creation (mainly in the service and manufacturing sectors) and real estate investment.

The slight growth in the global economy, along with the partial bilateral trade agreements between the United States and China—which are of particular interest to both countries' technology and agriculture sectors—temporarily staved off the possibility of recession in the US economy.

Meanwhile, China reported a growth of 6% in its economy, although its manufacturing and service sectors began to rally during the last quarter of the year, according to the BCRP's analysis.

In the Eurozone, the economy's performance was weak for the third consecutive year, growing by just 1%, according to figures from the European Central Bank. Analysts identified three fundamental factors that accounted for this sluggishness: political instability, trade tensions, and the rapid changes occurring in the automotive industry, which is being forced to adapt to a new consumer profile.

The Latin American economy registered a weak growth of just 0.1% during 2019, due to a highly complicated political and social context marked by the social crises that broke out in multiple countries across the region.

In Chile, Colombia, Bolivia, and Ecuador, certain sectors of society took to the streets to voice a series of social, political, and civil demands, such as better public services. Unfortunately, these demonstrations included an element of violence that had a negative impact on the situation.

During the year in review, Chile's economy grew by 1%, Colombia's by 3.2%, and Bolivia's by 3.2%. Ecuador's shrank by -0.1%. Brazil, the region's largest economy, grew by 1.1%, as it fought to overcome the aftereffects of the Operation Car Wash case.

In Argentina, where Peronist leader Alfredo Fernández became the new president in December 2019, the country's economy shrank by -2.7%, while Mexico reported almost no growth at all (0.1%).

Against this complicated external backdrop and a volatile internal climate, essentially due to problems between different branches of the government, Peru grew by 2.2% in 2019. Although this figure is rather modest, it was still the third-highest in the region behind Colombia and Bolivia.

Major political events, some of them unprecedented, such as the arrest of political leaders tied to the Odebrecht case, the suicide of ex-president Alan García, the closing of the Congress of the Republic, and the call for new congressional elections, occupied the national agenda and led, among other consequences, to a drop in the business sector's confidence regarding investment and new hires.

After closing the Congress in September, President Martín Vizcarra's administration used the powers of the Permanent Commission of the Legislative Branch to issue emergency orders, in accordance with Section 135 of the Peruvian Constitution.

We are happy to note that, despite the crisis brought on by Operation Car Wash ("Lava Jato") criminal investigation, the 2019 Pan American Games were held in Lima in July and August. As part of this successful athletic competition, Peruvian marathon runner Cristhian Pacheco, who is part of the "Quest for Gold" team sponsored

by Buenaventura, made history by taking home the gold medal as champion of the 42K marathon.

According to the BCRP, the private investment portfolio in the country is estimated at USD 17 billion, spread across 115 projects. The most attractive sectors for private investment are mining and oil & gas.

The mining sector alone presents an investment potential of over USD 8 billion, consisting of Quellaveco (Moquegua) at USD 5.3 billion,

Mina Justa (Ica) at USD 1.6 billion, and the expansion of Toromocho (Junín) at USD 1.3 billion. Additionally, there are the Corani Project (Puno) at USD 600 million and the Coroccohuayco Project (Cusco) with a similar investment.

Making these opportunities a reality will represent a tremendous leap in the possibility of generating development and creating formal jobs in the country's regions, with positive impacts on the consumption of goods and services, as well as revenue for a range of government bodies.

In 2019, the extractive sector in Peru (mining and oil & gas) was affected by low commodity prices and a drop in production at the country's most important mining deposits. Between October and November, however, the price of certain metals began to rebound, thanks to the cooling of the trade war between the United States and China.

According to the London Bullion Market Association (LBMA) the primary reference point in the precious metals market, as of December 31, 2019, the price per ounce of gold closed at USD 1,523, compared to USD 1,281.65 per ounce in December 2018. The price of silver at the close of 2019 was USD 18.05 per ounce, compared to USD 15.47 at the end of 2018.

The London Metal Exchange (LME) reported that the price per ton of copper closed 2019 at USD 6,156, and per ton of zinc at USD 2,292. Lead closed out the year at USD 1,922 per ton, and tin at USD 16,825.

Buenaventura's share price fell by 7% during 2019, closing the year at USD 15.10. This year, the Company reported a net loss of USD 28.5 M compared to a loss of USD 11.7 M the previous year. This was due mainly to a drop in net sales driven by a lower volume (USD -322 M) and counteracted by higher prices (USD +37 M). Cost of sales was also lower (USD 100 M) as were exploration expenditures at the operating units (USD 46 M) with income from affiliated companies (USD 49 M) and income from deferred taxes (USD 48 M).

The net debt-to-EBITDA ratio in 2019 grew from 0.99x to 2.06x. The cash position at the close of 2019 dropped from USD 369.2 M to 210.0 M and the CAPEX for the year totaled USD 103 M.

Safety continues to be a fundamental part of our activities. During 2019, we continued to focus on our efforts to eliminate accidents at our operations. Congratulations are due to Procesadora Industrial Río Seco (Huaral) for twelve months without accidents.

This achievement bolsters our vision that accidents can be avoided with all of our commitment. We are certain that this success will gradually be replicated in Buenaventura's other units and projects.

Our social management was focused on two main areas: strengthening friendly, trust-based relationships with the communities that welcome us in the surroundings of our operations; and promoting sustainable growth based on a shared social responsibility outlook in which everyone—the Company, all levels of government, the community, universities, and the general public—works together for sustainable and inclusive development.

PERU'S GROWTH IN 2019 WAS MODERATE, RANKING THIRD IN THE REGION, AT **2.2%**

WE CLOSED 2019
WITH A TOTAL
WORKFORCE OF
12,515
PEOPLE

We continued to apply best industry practices in an effort to innovate regarding environmental aspects such as responsible water management and efficient mine closure, in order to ensure the sustainability of operations and preserve our surroundings.

In the human resources area, we closed 2019 with a total workforce of 12,515 people. This number includes contractor personnel (9,428) who provide services at our operations.

The performance of our production units met expectations. Tambomayo, in Caylloma, Arequipa, produced 99,245 ounces of gold and 2,556,391 ounces of silver in 2019, compared to 129,172 ounces of gold and 3,928,808 ounces of silver the previous year.

In Orcopampa, another gold-producing unit in the province of Castilla, Arequipa, we continued to work on centralizing operations and the implementation of a debottlenecking program, in search of greater efficiency and productivity. We also continued to focus efforts on exploration works.

The Orcopampa Unit produced 41,660 ounces of gold compared to 115,887 ounces in 2018. This drop in production was due to the mine's centralization and restructuring plan.

La Zanja and Coimolache, two open-pit mines operating in Cajamarca, produced 31,500 and 162,196 ounces of gold in 2019, respectively, compared to 71,630 ounces of gold produced by La Zanja and 173,192 ounces produced by Coimolache in 2018.

Uchucchacua, a silver mine in the province of Oyón, Lima, produced 10,640,913 ounces of silver, compared to 16,583,698 ounces in 2018. This unit's production was affected by a 21-day halt in January 2019.

The Julcani Unit, our flagship mine, located in Huancavelica, produced 2,609,006 ounces of silver, exceeding the 2,482,907 ounces produced the previous year. This was the result of the decision to reduce the processing volume and focus on more accessible zones with higher grades, thus reducing dilution.

Sociedad Minera El Brocal (61.43% BVN) a subsidiary of Buenaventura that operates the Colquijirca Unit in Cerro de Pasco, registered a production of 43,394 metric tons of copper and 43,580 metric tons of zinc in 2019, compared to 46,231 metric tons of copper and 45,593 metric tons of zinc in 2018.

At El Brocal, lead production levels came to 23,599 tons, higher than the 20,582 tons reported in 2018. The mine also produced 4,366,438 ounces of silver, which was also higher than the 3,901,869 ounces from the previous year.

Sociedad Minera Cerro Verde (19.58% BVN), an affiliate that operates in Arequipa, reported a production of 455,305 metric tons of copper compared to 476,013 metric tons the previous year.

Minera Yanacocha (43.65% BVN) another affiliate, located in Cajamarca, produced 527,336 ounces of gold, which was higher than the 514,564 ounces reported the previous year.

The effort put into exploration works is also part of Buenaventura's culture that helps ensure the continuity of our operations.

At our underground units of Orcopampa, Uchucchacua, Tambomayo, Julcani, and El Brocal, progress consisted of 11,042 meters of exploration tunnels and 208,428 meters of diamond drill holes. In the open-pit mines of La Zanja and Coimolache, progress included 5,417

meters of diamond drill holes. Note should be made of the progress in tunnels for mine preparation and development, which totaled 62,037 meters. Of this total, 10,454 meters correspond to development and 51,583 to preparation.

In terms of our project portfolio, at Yumpaq (Pasco) we purchased 500 hectares in the community of Huachus, and performed planned resources delineation works for the project. These resources helped in the development of a prefeasibility study that enabled us to include 1.7 million metric tons of ore with an average grade of 19.18 ounces per ton of silver (22.5 million ounces of silver) in the reserves of our Uchucchacua Unit.

Meanwhile, the San Gabriel Project (Moquegua) completed the prefeasibility study, carried out with the company Ausenco, which estimated a total volume of 9.8 million metric tons of ore with an average grade of 5.01 grams per ton of gold (1.7 million ounces of gold).

At Trapiche (Apurímac) prefeasibility studies were completed with the company M3, estimating a volume of 283 million metric tons of ore with an average grade of 0.51% of copper (1.4 million tons of copper).

We are also pleased to announce that in 2019, together with Nexa, Gold Fields, and the Peruvian National Mining, Oil, and Energy Association (SNMPE) we founded the Peruvian Mining Innovation

Hub. This initiative, which is being promoted by our Innovation Management, along with its equivalent areas in our partner companies, is the first of its kind in Peru and aims to foster collaboration in the sector to help meet the major challenges faced by mining in our country. Last but not least, the Board of Directors of Compañía de Minas Buenaventura would like to thank the management, our shareholders, our suppliers, and all of our stakeholders, giving special recognition to the team members from all our production units, projects, and offices throughout eight regions of the country.

COMMENTS AS OF JUNE 16, 2020

By the time you read this letter, you will know that the effects of COVID-19 in Peru have grown more severe. The fight against the coronavirus has brought many activities nationwide to a halt, with severe social and economic consequences.

In the face of this completely new and unprecedented crisis, all of us as Peruvians have been focusing our efforts on the same objective: to flatten the curve in the spread of the virus and to save as many lives as possible.

At Buenaventura, we have adapted our operations to these new circumstances to safeguard the health and wellbeing of our workers, contractors, and neighboring communities, all of whom are our main priority.

During the first part of quarantine, our direct operations were focused solely on critical and essential tasks, such as pumping systems, water treatment, power supply, electric substations, plant maintenance, health and occupational services, among others. However, during this time, we continued to process ore in the leach pads of our La Zanja and Coimolache units in Cajamarca.

In 2020, we completed the refinancing of the syndicated loan. This new loan will be for five years with a grace period of 30 months, with six-month installments starting in October 2022. The rate was reduced to Libor (3m) + 190 bps from Libor (3m) + 215 bps.

It should be noted that our Company has a solid cash position of USD 222 million as of March 2020, with fixed monthly costs for critical activities of approximately USD 12 to 14 million.

We continue to monitor current growth CAPEX, G&A, and the payment of dividends to shareholders with a focus on preserving the Company's liquidity.

The Peruvian government issued an Executive Order (Decreto Supremo) authorizing mining companies to gradually recommence their activities as of May 11, 2020.

For this purpose, we have a strict new health protocol (Workplace Plan for COVID-19 Surveillance, Prevention, and Control) approved by the relevant authorities, with the objective of preventing and minimizing the spread of the virus at our operations and projects.

To comply with the new regulations, Buenaventura has decided to restart its operations in two stages, prioritizing mines with the highest production levels. It should be stressed that we have already submitted all of the required

documentation to restart operations at all of our mining units, and we have the permits issued by the Ministry of Energy and Mines for such purpose.

Our plan for restarting operations has been conducted as follows:

Stage 1 (started May 16, 2020):

- ▶ Tambomayo
- ▶ Uchucchacua
- ▶ El Brocal (Tajo Norte y Marcapunta)
- ▶ Coimolache

Stage 2 (started June 16, 2020)

- ▶ Orcopampa
- ▶ Julcani
- ▶ La Zanja

We would also like to report that on March 30, we made the decision to suspend our forecasts for all of 2020, since it was not possible at that time to accurately quantify the full impact of COVID-19 on our operations and our future performance. This makes it difficult to estimate the results for this year. However, we continue to improve our current operating plans to focus on high-grade zones while maintaining exploration and cost reduction efforts.

Buenaventura will provide its updated forecast once all operations have reached full capacity and we have a clearer outlook on the results for 2020. As we indicated in our two-stage plan, we expect to reach full capacity by the end of July.

We continue to work with leadership and sacrifice, as a united team, to provide the best for our operations, our families, and our country. We know we will come out of this stronger, more solid, and satisfied with having fulfilled our duty.

We would like to offer a special acknowledgment to our workers, contractors, suppliers, and communities. We appreciate you and value your efforts deeply. Let's continue to build Buenaventura's future together!

Sincerely,

Roque Benavides
Chairman of the Board

67 YEARS OF HISTORY AND LONG-TERM VISION

Buenaventura has over 67 years of experience in the exploration, development, construction, and operation of mines, as well as **joint ventures** with world-class companies.

CORPORATE CULTURE

Vision

Develop mineral resources while creating the greatest possible value for society.

Mission

- › Be the Mining Company of choice, and the most widely accepted, among communities, authorities, and the general public.
- › Make the Company as highly valued as possible by all of its stakeholders.

Values

SAFETY

Promote respect for our team members' lives in all of our processes, operations, and activities.

HONESTY

Act in an upright and honest manner, never lying, deceiving, or omitting the truth.

INDUSTRIOUSNESS

Bring passion to our work, giving everything our best and acting efficiently, safely, and responsibly.

LOYALTY

Make a commitment to the Company, its mission, vision, and values. We are all part of the same team.

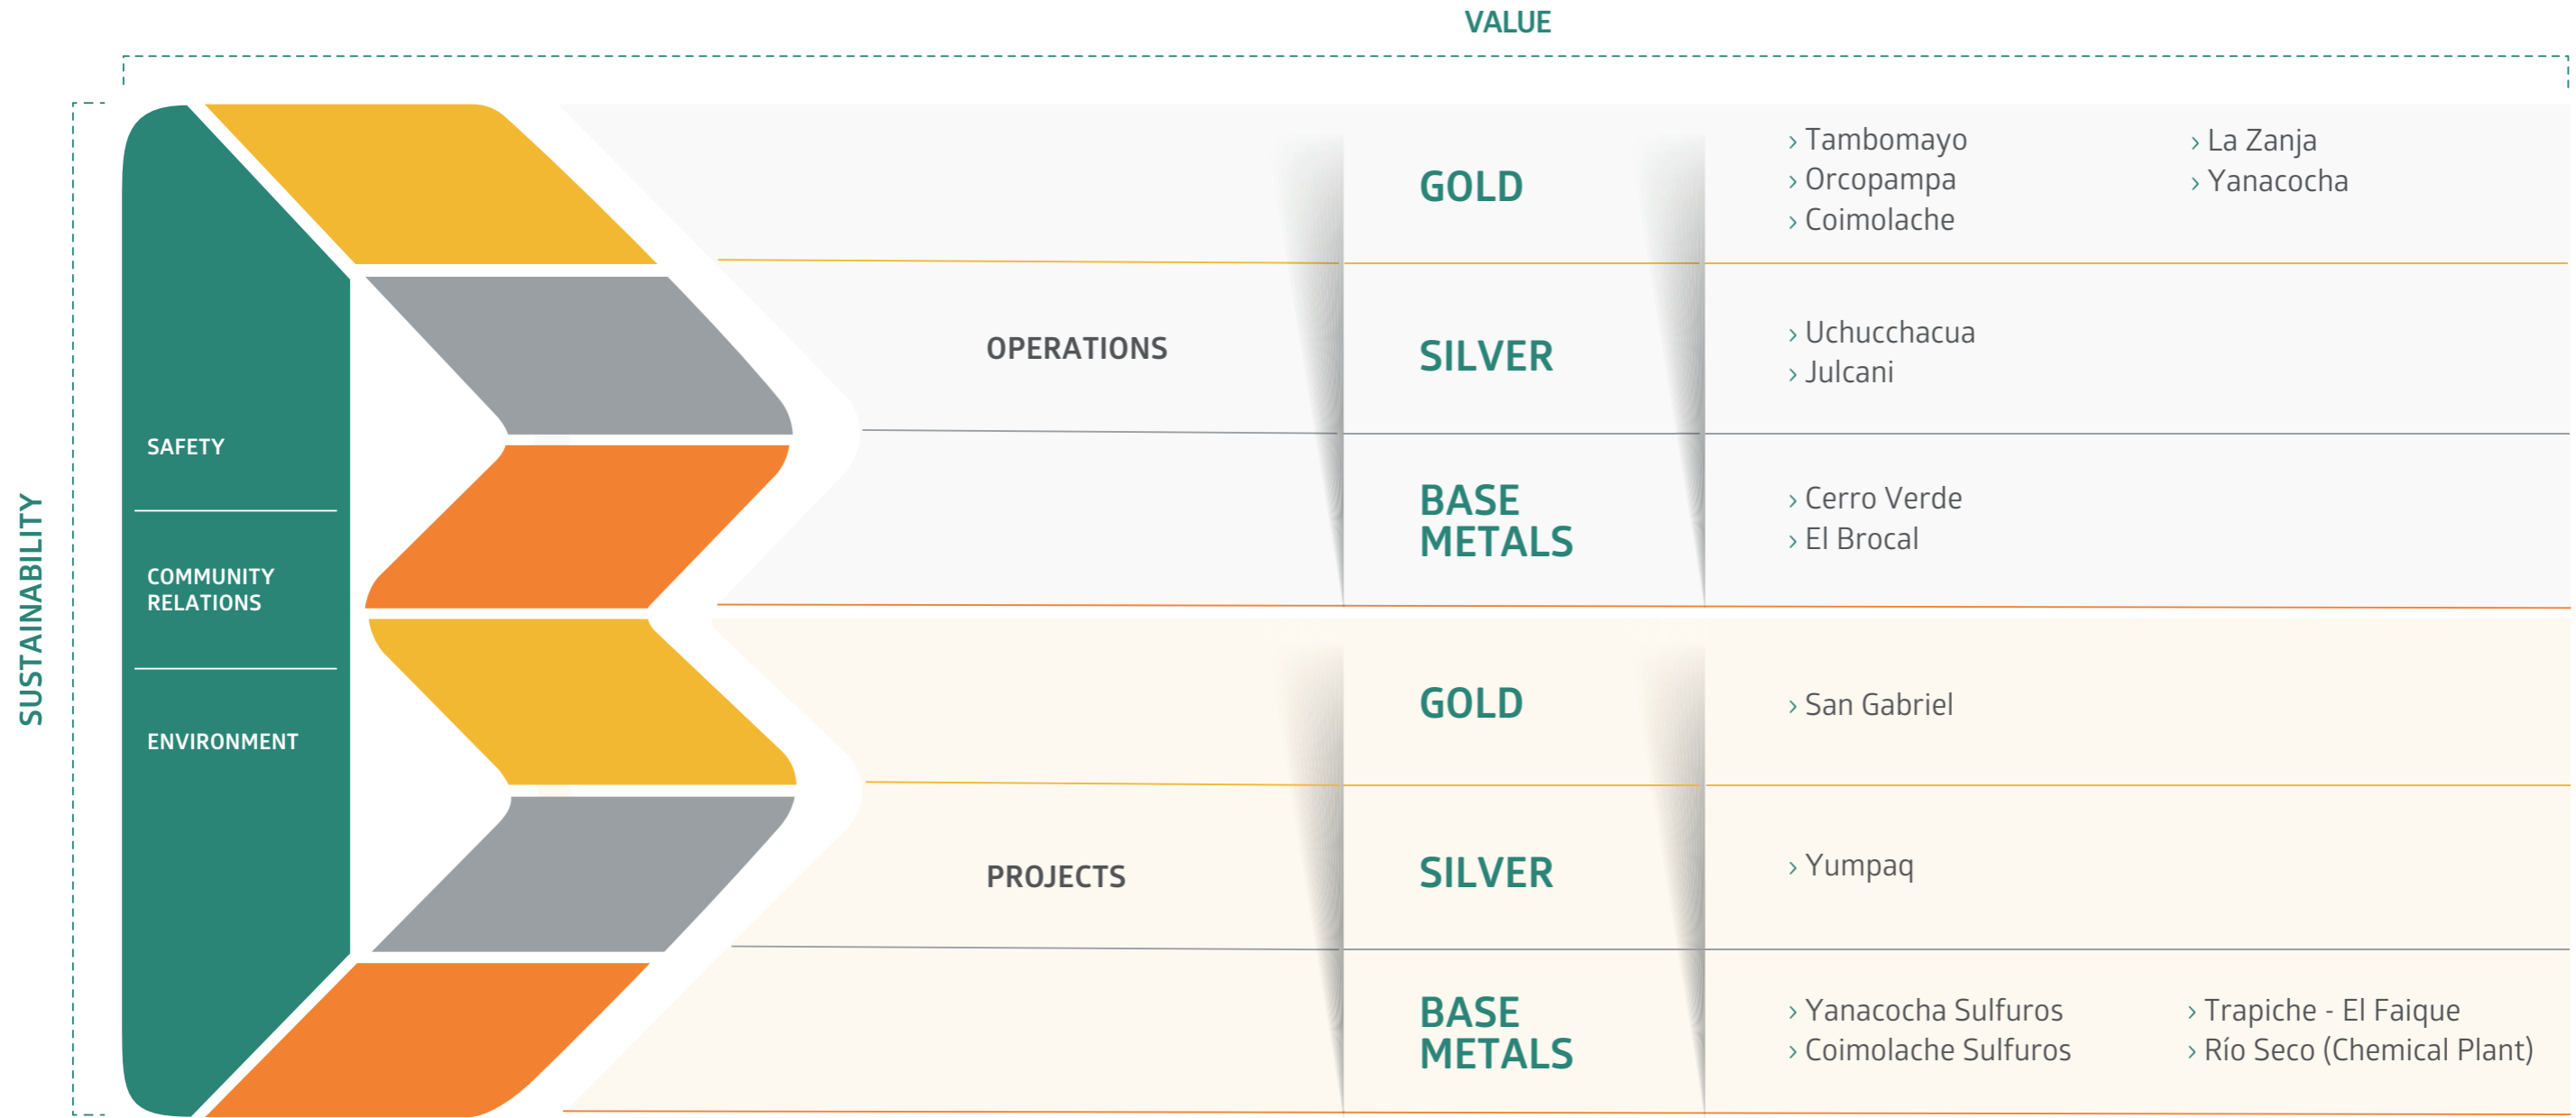

RESPECT

Be considerate and treat others with courtesy and respect for their ideas, culture, and rights

TRANSPARENCY

Be truthful, clear, timely, and unambiguous in all of our communications and actions.

Strategic Map

OPERATIONS

During 2019, Compañía de Minas Buenaventura S.A.A. operated eight mining units, of which five are underground (Orcopampa, Uchucchacua, Julcani, Tambomayo, and Marcapunta) and three are open-pit (La Zanja, Coimolache, and Tajo Norte).

At Tambomayo
640,914
TMS
 of ore were
 processed in
 2019

Tambomayo (100% BVN)

Tambomayo is an epithermal deposit with quartz veins and mineralization, mainly gold-silver, with significant lead and zinc content. The mining unit is located in the Province of Caylloma, in the Region of Arequipa.

The main structure is the Mirtha vein, which runs NW. At the southeast end, the Paola and Paola Norte are being developed. These three veins contain 85% of the mineral resources of this deposit.

The explorations performed to date show economic mineralization between 4,950 and 4,100 masl, which means 850 vertical meters and 1,200 horizontal meters, thus signifying a great geological potential to be explored in the structures associated with this principal system.

In 2019, the debottlenecking program was implemented, which helped reduce operating costs in the Tambomayo Unit to less than USD 100 per ton.

In 2019, 640,914 DMT were processed, with 5.80 g/t Au, 4.54 oz/t Ag, 1.35% Pb

and 1.99% Zn, recovering 99,245 ounces of gold, 2,556,391 ounces of silver, 7,603 FMT of lead and 9,672 FMT of zinc. The average annual cash cost was USD 679 /oz of gold.

The mineral reserves as of December 31, 2019 are 2,445,606 DMT, with 0.120 oz/t of gold (3.75 g/t) 4.46 oz/t of silver, 1.27% lead, and 1.66% zinc, which represents 294,526 ounces of gold, 10,898,249 ounces of silver, 31,002 MT of lead, and 40,645 MT of zinc.

The measured and indicated resources excluding reserves are 542,401 DMT with 0.085 oz/t of gold (2.66 g/t) 4.16 oz/t of silver, 0.79% lead, and 1.09% zinc, which represent 46,323 ounces of gold, 2,256,066 ounces of silver, 4,310 MT of lead, and 5,935 MT of zinc.

In 2019, 719 meters of exploration works were executed, with 52,356 meters of diamond drill holes. This program was aimed at completing the reconnaissance of the veins within the operational footprint and reclassifying and extending the

resources (infill drilling). Three main targets were explored—Profundización, Venturosa, and Los Diques—with the goal of opening new exploration fronts around the current operating zone between levels 4,540 and 4,340.

Additionally, the Mine Area performed 6,764 meters of mining work, of which 924 meters correspond to development and 5,840 meters to mine preparation.

In the processing plant, the leaching of flotation concentrates (Pb) began in March 2019. Not having to leach 100% of the ore has enabled us to reduce much of the cyanide consumption, and thus, the processing cost.

In October 2019, we received authorization to start operating the processing plant at 2,000 tons per day.

Orcopampa (100% BVN)

The Orcopampa Unit is located in the province of Castilla, in the Arequipa region, at 3,800 masl, and 150 km from the city of Arequipa in the southern Andes of Peru. It is a fissure-type epithermal deposit of precious metals (Au – Ag). Currently, it operates the Chipmo Mine, which contains a system of gold-bearing veins related to tellurides.

In 2019, a mining operations centralization program was implemented that formed part of the debottlenecking and helped achieve a positive operating margin in the fourth quarter of 2019.

During 2019, the plant processed 127,079 t of ore with a grade of 0.33 oz/t of gold (10.30 g/t) and 0.19 oz/t of silver, recovering 41,660 ounces of gold and 18,791 ounces of silver. The metallurgical recovery was 96.75% for Au and 76.76% for Ag.

The mineral reserves of the Orcopampa Unit, as of December 31, 2019, totaled 626,276 t with 0.32 oz/t of gold (10.00 g/t Au) and 0.49 oz/t of silver, representing a metal content of 201,276 ounces of gold and 304,611 ounces of silver.

The measured plus indicated mineral resources, excluding the reserve, are 237,778 DMT with 0.22 oz/t of gold (6.87 g/t Au) and 0.50 oz/t of silver, representing 52,509 ounces of gold and 119,422 ounces of silver.

In 2019, an exploration program was carried out with 1,229 meters of mining work and 59,509 meters of diamond drilling, mainly focused on exploration and the infill drilling of the Pucará Sur, Pucara Sur Piso, Pucarina, María Isabel 2, Ocoruro, and Nazareno veins, between levels 3,690 and 3,540.

The Mine Area performed 7,013 meters of mining works, of which 2,037 meters were development works and 4,976 meters were mine preparation works.

Orcopampa has
626,276
TMS
 of mineral reserves as of
 December 31, 2019

Compañía Minera Coimolache S.A. (40.095% BVN) Tantahuatay

Buenaventura is in charge of the management of Compañía Minera Coimolache S.A. (40% BVN, 44% SPCC, and 16% ESPRO) which operates the Tantahuatay Mine, located in the district of Hualgayoc, in the province of the same name, 50 kilometers north of the city of Cajamarca.

In 2019, mining was performed in the Tantahuatay 2 and Ciénaga Norte pits, between levels 3,972 to 3,852 and 4,044 to 3,900, respectively.

A total of 13,878,907 DMT of oxidized ore was sent to the leach pad, with grades of 0.017 oz/t of gold (0.537 g/t) and 0.342 oz/t of silver (10.63 g/t) of which 1,996,030 DMT came from hauling Goldfields oxides. Fine metals production came to 162,196 ounces of gold and 754,306 ounces of silver. The average annual cash cost was USD 684.00 per oz/Au.

Diamond drilling of oxides totaled 5,417 meters, focused on the Tantahuatay 2 and Ciénaga Norte operating zones, and the Azufre and Mirador Nor-Oeste projects.

No sulfide drilling was performed in 2019. Work was focused on validating and standardizing all of the information to generate updated models. Support was provided through the supervision of the drilling program performed by Regulus Resources in the Sinchao zone, for a total of 13,414 meters.

The measured and indicated oxide mineral resources total
11'246,337
TMS

As of December 31, 2019, the proven and probable oxide mineral reserves at Tantahuatay total 66,858,657 DMT, with ore grades of 0.011 oz/t of gold (0.343 g/t) and 0.256 oz/t of silver (7.976 g/t) representing 737,042 ounces of gold and 17,145,203 ounces of silver.

This result comprises six ore deposits: two currently in production (Tantahuatay-2 and Ciénaga Norte) and the Mirador Norte, Mirador Sur, Tantahuatay 2 Extensión Nor-Oeste, and Tantahuatay 5 Projects, with the last of these being the new project placed in reserve in 2018. The calculation of reserves in the deposits was based on an economic pit of 1,300 USD/Oz Au. As of the close of fiscal year 2019, there is ore remaining in the pad, counted as Inventory in Pad, totaling 5,290.08 ounces of gold and 314,405 ounces of silver.

The measured and indicated oxide resources, excluding reserves, as of December 31, 2019, total 11,246,337 DMT, with 0.009 oz/t of gold (0.273 g/t) and 0.30 oz/t of silver (9.351 g/t) representing 98,544 ounces of gold and 3,380,998 ounces of silver.

The design of the future Mirador Norte Pit is evaluating the availability of areas for backfills, with a new design with two access routes to the Mirador Norte Pit that will connect to the existing haul road, which will be used to haul material from the pre-mining and mining works to the Ciénaga Norte or Tantahuatay deposits and/or pads, as applicable.

The extractions in the leach pad for 2019 were 68% gold and 16 % silver. Cumulative extractions in the leach pad from the start of operations through December 31, 2019 are 75.13% gold and 17.77% silver.

In December 2019, the construction of 5.50 ha of leach pad was completed in Ciénaga Norte, to process ore from the pit of the same name. Internal 10 kV distribution lines were also expanded (total length: 3.53 km) and three substations were built at Tantahuatay and two at Ciénaga for pumping and handling water in the operating ponds.

An additional 80 lodging modules were built for 160 people at the Permanent Camp.

Minera La Zanja S.R.L. (53.06% BVN)

Minera La Zanja SRL is a subsidiary of Buenaventura that operates the La Zanja Mine, located in the district of Pulán, province of Santa Cruz, 107 kilometers northwest of the city of Cajamarca.

In 2019, operations were focused on the San Pedro Sur and Pampa Verde pits. 1,577,645 DMT of ore were sent to the leach pad from the Pampa Verde and San Pedro Sur pits, with 0.015 oz/t of gold (0.464 g/t) and 0.216 oz/t of silver (6.733 g/t) on average, recovering 31,500 ounces of gold and 97,204 ounces of silver.

Since operations began at La Zanja in 2010, a total of 1,082,316 ounces of gold and 2,747,843 ounces of silver have been produced. The mineral reserves of the open pits total 560,177 DMT, with 0.013 oz/t (0.411 g/t) of gold and 0.271 oz/t (8.414 g/t) of silver, which means 7,401 ounces of gold and 151,531 ounces of silver. Additionally, there is an inventory in pads and plant of 4,594 recoverable ounces of gold and 109,396 ounces of silver.

The measured plus indicated oxide resources outside the reserve pit and inside the economic cone of resources of USD 1,430/oz Au total 12,906,067 DMT, with 0.014 oz/t of gold (0.438 g/t) and 0.284 oz/t of silver (8.842 g/t), which means 181,659 ounces of gold and 3,668,976 ounces of silver.

In 2019, the Explorations Area drilled a total of 2,926 meters of diamond drill holes, of which 2,777 meters were in the Corredor Emperatriz – Sector Emperatriz Sur project, and 148 meters were drilled in the San Pedro Sur Pit.

1'577,645 TMS
were sent to the leach pad

Uchucchacua (100 % BVN)

The Uchucchacua Unit is located in the district of Oyón, province of Oyón, Lima region. It is an underground mining operation that produces silver, lead, and zinc. In late 2019, the Yumpaq Project was integrated into our unit after completing the delineation of reserves and resources.

Yumpaq is located 5 kilometers NE of Uchucchacua, and consists of a system of veins with a predominantly NE orientation, which are in tension with the Cachipampa Fault that controls the mineralization of Uchucchacua.

In 2019, a total of 1,335,018 DMT were processed, with 9.06 oz/t of silver, 1.52% lead, and 2.2% zinc, with the ore coming from the Socorro, Carmen, and Casualidad Mines, obtaining 10,640,913 ounces of silver, 17,635 FMT of lead, and 19,144 FMT of zinc. The average annual cash cost for 2019 was USD12.15/oz Ag.

Uchucchacua's mineral reserves, including the Yumpaq Project, as of December 31, 2019, totaled 10,425,777 DMT, with 9.46 oz/t of silver, 1.19% of lead, 2.03% zinc, and 6.42% manganese, representing contents of 98,597,841 ounces of silver, 124,359 MT of lead, and 211,939 MT of zinc. Within this total, the Yumpaq Project accounts for 1,168,113 DMT, with 19.32 oz/t of silver, 0.42% lead, 0.75% zinc, and 15.41% manganese, representing contents of 22,572,876 ounces of silver, 4,928 MT of lead, and 8,710 MT of zinc.

The measured and indicated resources, excluding reserves, of the Uchucchacua Unit and the Yumpaq Project are 3,139,988 DMT, with 11.26 oz/t of silver, 1.21% lead, 1.90% zinc, and 7.89% manganese, which means 35,367,936 oz of silver, 38,138 MT of lead, and 59,705 MT of zinc.

Progress in exploration undertaken included 1,778 meters of mining works and 57,402 meters of diamond drill holes, focused primarily on the Socorro, Cachipampa, Carmen, and Casualidad Sectors, of which 7,907 meters correspond to infill drilling, with the goal of increasing the certainty of resources to be measured.

The Mine Area executed 24,903 meters of mining works, of which 1,412 meters correspond to development works and 23,491 meters to mine preparation works.

In the Uchucchacua processing plant, in the thickening and filtering stage, installation began for a new Diemme filter that will allow us to increase our filtering capacity.

On December 5, 2019, the file was submitted to obtain authorization for operations at 4,500 tons per day.

As of December 31, 2019, mineral reserves totaled

10'425,777 TMS

Julcani (100 % BVN)

The Julcani Unit is located in the province of Angaraes, department of Huancavelica, in the central Andes of Peru. It is an underground operation that essentially produces silver with lead and gold content.

In 2019, 123,818 t of ore were processed from the Acchilla Mine, with an ore grade of 21.9 oz/t of silver, 0.092 g/t of gold, 0.86% lead, and 0.16% copper, recovering 2,609,006 ounces of silver, 150 ounces of gold, 966 MT of lead, and 185 MT of copper. The average annual cash cost was 13.49 USD/oz Ag.

The mineral reserves as of December 31, 2019, between the Acchilla and Estela Mines, totaled 255,097 t, with 21.02 oz/t silver and 2.00% lead, representing 5,360,856 fine oz of silver, 1,432 oz of gold, 5,108 MT of lead, and 1,089 MT of copper. Of these total reserves, 77% belongs to the Acchilla Mine and the remaining 23% to the Estela Mine.

The indicated mineral resources, excluding reserves, total 167,061 t, with 20.96 oz/t of silver and 1.26% lead, representing contents of 3,502,157 ounces of silver and 2,103 MT of lead.

During 2019, at the Acchilla Mine, a total of 7,263 m of underground mining works and 32,305 m of diamond drill holes were executed. The new mineral found totaled 100,249 t, with 23.18 oz/t of silver, 1.79% lead (2,323,772 ounces of silver) with a volume calculation ratio of 13.85 t/m of advance. The veins that contributed the new mineral are Hanna 1, Tilsa 3, Yamila Piso, Acchilla 7B Ramal, Sandra, Mayra, and Sta. Fe Techo 1. The new mineral replacement to reserve production ratio is 1.

The Mine Area also undertook 5,726 meters of mining works, of which 880 meters correspond to development and 4,846 meters to mine preparation works.

Meanwhile, the geological review of the Nueva Esperanza Project will continue on the surface, with the goal of evaluating and defining the type of deposit and its Ag-Cu potential.

The processing plant successfully decreased the arsenic percentage in the concentrates with the use of metabisulfite and pH control, applying this recommendation for minerals with grades in excess of 1% As in the plant feed.

Plant tests were performed for the reprocessing of tailings from Dams 1, 2, and 3, obtaining concentrates with grades of 35 to 40 oz/t Ag and 2 to 4 g/t Au.

In November, we received authorization to raise the height of Tailings Dam 9 to an elevation of 4,136, thus expanding the life of the mine by approximately seven years.

The new mineral found this year totaled

100,249 TMS

Sociedad Minera El Brocal S.A.A. (61.43 % BVN)

Sociedad Minera El Brocal S.A.A. operates the Colquijirca mining unit in the province and region of Cerro de Pasco, 15 km south of the city of the same name.

It currently extracts zinc, lead, and silver ore from the Tajo Norte open-pit mine, and copper ore from the Marcapunta Norte underground mine. The minerals from both zones are processed in Concentrating Plants 1 and 2 at Huaraucaca.

In 2019, a total of 3,407,914 DMT of lead and zinc ore (Tajo Norte) were processed, recovering 2,974,072 ounces of silver, 23,599 MT of lead, and 43,580 MT of zinc. Additionally, 2,926,124 DMT of copper ore (Marcapunta Norte) were processed, recovering 1,392,359 ounces of silver, 18,726 ounces of gold, and 43,394 MT of copper.

In 2019, the operation achieved a total processing value of 6,334,038 DMT, which represents an average daily processing volume of 17,354 DMT. The cumulative fine production for 2019 was 4,366,438 ounces of silver, 18,726 ounces of gold, 23,599 MT of lead, 43,580 MT of zinc, and 43,394 MT of copper contained in the three concentrates produced.

The proven-probable mineral reserves as of December 31, 2019, for Tajo Norte - Smelter, which includes the Zn-Pb-Ag zone and the Cu-Ag zone, are 42,215,608

DMT, with 1.08 oz/t of silver, and 1.11% Cu, which means 45,580,615 ounces of silver and 470,215 MT of copper.

The proven-probable mineral reserves as of December 31, 2019, for the Tajo Norte pit (Zn-Pb-Ag zone) are 14,756,041 DMT, with 2.52% Zn and 1.17% Pb, making for 371,350 MT of zinc and 173,284 MT of lead.

The proven-probable mineral reserves as of December 31, 2019, for Marcapunta Norte are 34,503,283 DMT, with 0.023 oz/t of gold, 1.30% copper, and 1.15 oz/t of silver, making for 805,168 oz of gold, 450,220 MT of copper, and 39,798,655 ounces of silver.

The exclusive measured-indicated resources of Marcapunta Norte total 26,285,070 DMT, with 0.023 oz/t of gold, 1.63% copper, and 0.87 oz/t of silver.

In 2019, 12,807 meters of diamond drill holes were undertaken, both on the surface and inside the mine. 84% of this total (10,768 meters) was performed in the Marcapunta SW and Marcapunta SE zones (underground) in order to recategorize inferred resources to measured and indicated reserves and to Cu-Ag ore reserves, with positive results in the increase of Au values. Another 1,115 meters were undertaken in nine boreholes in Marcapunta Sur for geometallurgical studies of arsenical copper ore. The

laboratory tests were positive, with copper recoveries of 85% to 90%, which helps increase our resources. Additionally, 14,840 meters of diamond drilling was performed for mineral control.

At the underground mine of Marcapunta Norte, 5,201 meters of development works were undertaken and 12,430 meters of preparation works, for a total of 17,631 meters.

In 2019, the north slope remained unstable in the open pit, causing delays in the mining sequence. This instability was constantly monitored with radar, making it possible to control potential harm to personnel and damages to equipment.

In the concentrating plants, the maintenance planning and control system was strengthened. Together with an operational stability study conducted by the engineering firm Hatch, which has made it possible to draw up an intensive maintenance plan.

The total processing volume achieved in 2019 was

**6'334,038
TMS**

Minera Yanacocha S.R.L. (43.65 % BVN)

Yanacocha's CAPEX in 2019 was

US\$ 109 millones

Gold production in 2019 totaled 527,000 ounces, compared to 515,000 ounces produced in 2018. Silver production came to 0.737 million ounces versus 1.076 million ounces in 2018. During 2019, the gold mill processed 4.75 million dry metric tons of ore, with an average grade of 1.97 grams per ton and a gold recovery of 75.2%, obtaining a gold production of 229,000 ounces compared to 268,000 ounces in 2018. The lower gold mill production was due to the lower tonnage processed (4.8 million vs. 5.5 million in 2018) a higher soluble copper content, lower recovery, and a lower grade compared to 2018. The ore discharged in the leach pads in 2019 totaled 31.5 million dry metric tons, higher than in 2018, when the total was 23 million tons. This was due to the higher extraction of ore from Yanacocha and Quecher Main. Gold production was 298,000 ounces, higher than the 247,000 ounces in 2018. The proven and probable reserves of Minera Yanacocha as of December 31, 2019, totaled 6.9 million ounces of gold, 102.5 million ounces of silver, and 0.66 million MT of copper. As of December 31, 2019, resources totaled 7.8 million ounces of gold, 26.4 million ounces of silver, and 0.05 million MT of copper.

Yanacocha's CAPEX in 2019 came to USD 109 million, with the main capital expenditures being the Quecher Main Project (\$96.9 M) the EWTP LQ Upgrade Project (\$8.9 M) and the Yanacocha Shield Project (\$3.2 M). Mine closure expenditures totaled USD 25.6 M. Quecher Main is the bridge for the continuity of Yanacocha's operations, contributing 1.3 million ounces of gold, consisting of two leach pads, Carachugo 11 (5 ha) and Carachugo 14 (57 ha); a pumping station; an operating pond and a stormwater pond; an open pit; and works related to mine development. The construction of Phases 3 and 4 is still underway, with operations scheduled through 2027.

In October 2019, Quecher Main announced its commercial production. The EWTP LQ Plant Upgrade Project includes the installation of new equipment to achieve the required design flow volume.

The Yanacocha Sulfuros Project is located in the current operating zone and consists of the processing of sulfide minerals for the production of copper and gold, which would substantially extend

the life of mine to 2041. During the first quarter of 2019, the feasibility studies were completed and the Environmental Impact Assessment was approved. Currently, the definitive feasibility is being developed, which is expected to be completed in 2021, after which the investment decision will be made. As part of the activities of the Project's Definitive Feasibility Stage, test stope mining tests were begun in the southern zone of Chaquicocha Subterráneo, which will help validate the mining method, productivity, geotechnical conditions, and develop the exploration platforms. To date, progress is at 1,461 of a total of 2,025 meters. Construction was completed on the Chaquicocha Central exploration tunnel, with a total length of 623 meters, of which 391 meters were executed in 2019. Additionally, diamond drill holes were executed in Chaquicocha Subterráneo for a total of 33,234 meters.

Yanacocha continued working with local communities in the area of influence of the Yanacocha Sulfuros Project, creating local job opportunities, addressing their concerns regarding water, and reaching historic commitments. In 2019, Yanacocha achieved the commercial production of Quecher Main with the solid participation and support of contractors and local communities.

In 2019, Minera Yanacocha continued to maintain and improve its ISO 14001:2015 certified environmental management

system, the management of its ISO 17025 accredited environmental laboratory, and control of its process activities certified by the International Cyanide Management Code. Improvements were focused on reducing water use in its operations, relocating its environmental laboratory to La Quinua, reducing the use of plastic and styrofoam, and operational improvements in its processes.

Finally, in March 2019, the Environmental Impact Assessment was approved for the Yanacocha Sulfuros Project. The amendment of this Assessment was begun immediately to incorporate adjustments to the project, with citizen participation in 56 villages, completing the submission of the file to the National Environmental Certification Service (Senace) in December.

Sociedad Minera Cerro Verde S.A.A. (19.58 % BVN)

The Cerro Verde production unit is operated by Freeport–McMoRan and is located 30 km SW of the city of Arequipa, in the districts of Uchumayo and Yarabamba.

In 2019, 143.5 million DMT were processed by flotation, which compares favorably with the 141.5 million DMT processed in 2018, with an ore grade of 0.362% copper, producing 1,873,000 DMT of copper concentrates with an average grade of 23.17% copper and a recovery of 83.5%. Total production came to 915,677,000 pounds of copper, 28,390,000 pounds of molybdenum, and 4.69 million ounces of silver contained in the concentrates. Additionally, 88.1 million pounds of copper were produced in cathodes.

The cash cost was USD 1.565 per pound of copper and the total cost was USD 1.906 per pound of copper produced.

In 2019, sales totaled USD 2.89 billion, making for net earnings of USD 390.4 million. The long-term debt was reduced from USD 1.023 billion to USD 826 million.

Investment totaled USD 283.5 million in capital projects, compared to USD 280.2 million in 2018.

Since 2009, Cerro Verde has been involved in a dispute with the tax authorities over the collection of royalties for the periods from December 2006 through December 31, 2013. The installment payments for the periods of December 2006, 2007, and 2008 were completed in the fourth quarter of 2019. The periods from January 2009 to September 2011 are being paid in installments. The royalties for October through December 2011 were paid in the fourth quarter of 2019.

During 2019, Cerro Verde availed itself of two installment plan programs for 2012 royalties, which it began to pay during the third quarter of 2019; and for the 2013 period.

There are currently no other tax periods in dispute with the tax authorities. Cerro Verde believes it was not required to make these payments according to the tax stability agreement signed in 1998 with the Peruvian government. Nevertheless, Cerro Verde has acted in good faith at all times, and continues to evaluate alternatives to defend its rights.

In 2019,
US\$ 141.5 million of DMTs
were processed.

PROYECTOS

Continuing with the implementation of the project management methodology described in *Project Management for Mining: Handbook for Delivering Project Success (2015)* by Terry L. Owen and Robin J. Hickson, and having completely closed the gaps identified in 2018 and 2019, the past few years have been marked by the maturation of our projects along the following lines:

I. Projects in the Feasibility Stage

SAN GABRIEL PROJECT (100% BVN)

The San Gabriel Project is an intermediate sulfidation epithermal deposit with gold, copper, and silver metal contents, located in the province of General Sánchez Cerro, in the Moquegua region.

In 2019, the prefeasibility study was performed and concluded with Ausenco/Agnitia, which defines an underground mining operation using the Overhead Drift and Fill (ODF) method at a rate of 3,000 TPD, processed in a scalable gravimetric-CIL-ADR plant for the production of doré bars, based on the use of filtered tailings. Based on this study, the following resources and reserves have been estimated:

Reserves: 11.6 MT with 4.68 g/t of Au, representing 1.7 M oz/Au.

RIO SECO CU-AS INDUSTRIAL PLANT PROJECT (100% BVN)

The Rio Seco Industrial Plant Project consists of a hydrometallurgical process for the leaching of Cu-As concentrates from the El Brocal Unit that allows for the extraction of copper cathodes, a high-grade Au/Ag residue, and As in the stable form of scorodite crystals.

In 2019, continuous industrial scale testing remained in effect in the Rio Seco pilot plant.

II. Projects in the Prefeasibility Stage

TRAPICHE PROJECT (EL MOLLE VERDE S.A.C. - 100% BVN)

The Trapiche Project is a copper and molybdenum porphyry deposit from the Oligocene Age located on the southwestern side of the Andahuaylas-Yauri Belt, in the province of Antabamba, Apurimac region.

In 2019, the prefeasibility study was conducted and completed with the companies M3/ Mining PluPENKCB, which defined an open-pit mining operation at a rate of 45,000 TPD, processed in a crusher-leach pad-SX/EW plant for the production of copper cathodes. Based on the study, the following resource and reserve volumes have been estimated:

Reserves: 283.2 MT with 0.51% Cu, representing 1.4 MT of Cu (leachable).

Resources: 540 MT with 0.31% Cu, representing 1.7 MT of Cu (floatable).

II. Projects in the Conceptual Stage

COIMOLACHE SULFUROS PROJECT (COMPAÑÍA MINERA COIMOLACHE S.A. - 40.95% BVN)

The Coimolache Sulfides Project consists of an epithermal arsenical copper mineralization covering an area of 2.0 by 2.0 km, and enriched copper located beneath the oxidized area of the Coimolache Mine.

In 2019, the conceptual study developed with the company M3/Mining PluPENKCB was completed, which suggests an open-pit operation at a production rate of 20-40K TPD, to be processed in a concentrating plant for the production of Cu-As concentrates, based on the use of filtered tailings.

Additionally, the necessary field works were completed to support the basic engineering of the filtered tailings deposit to be concluded in the first quarter of 2020, as well as the updating of the resources model with SRK, defining:

Inferred resources: 933 MT with 0.32% Cu, 0.18 g/t Au, 7.89 g/t Ag, representing 3 MT Cu and 5.4 M oz/Au.

III. Projects Pending Entry into the Conceptual Phase

YUMPAQ PROJECT (100% BVN)

The Yumpaq Project is located 5 kilometers from our Uchucchacua Mine, and consists of a system of intermediate sulfidation veins running primarily northeast, in tension with the Cachipampa Fault, which controls the mineralization at Uchucchacua.

In 2019, field works were completed and the prefeasibility study was concluded with Agnitia, which defines overhead drift and fill (ODF)/mechanized cut and fill underground operation at a rate of 1K TPD, which will be transported by truck to the Uchuchachu Unit for processing. Based on said study, the following reserve amounts have been calculated:

Reserves: 1.2 MT with 19.32 oz/t Ag, representing 22.6 M oz/Ag.

The subsequent development and construction of the Yumpag deposit will be included in the Uchuchacua Unit, and no longer as an independent project.

EL FAIQUE PROJECT (100% BVN)

The El Faique Project is a volcanogenic massive sulfide (VMS) copper ore deposit hosted in the Mesozoic basin of Lacones, located in the province of Tambogrande, in the Piura region.

In 2019, the final version of the file was submitted to Pro-Inversión, and is currently in the process of being reviewed by the Ministry of Energy and Mines (MINEM).

OTHER BUSINESSES

Consortio Energético de Huancavelica S.A. (CONENHUA) (100% BVN)

This Company has now been in business for 36 years. In 2019, its regulated transmission lines and substations were put up for sale, and formally changed owners in late December. This sale comprised those systems and assets whose revenue is set by the regulatory agency, Osinergmin, as follows:

System	Voltage	Length (km)	Location
Trujillo Norte SS – Cajamarca Norte SS Line	220	137	Cajamarca
Cajamarca Norte SS - La Pajuela SS Line	60		Cajamarca
Callali - Ares Line	138	103.7	Arequipa
Huancavelica-Ingenio Line and Input Substation	60	32.9	Huancavelica
Lomera Substation	220/60/23	-	Huaral

However, CONENHUA continues to operate and maintain the secondary transmission lines that supply power to Buenaventura’s mining and industrial operations and their respective substations, in both high and medium voltage. These operations are La Zanja, Coimolache, Uchucchacua, Río Seco, El Brocal, Julcani, and Tambomayo.

The performance of all of the abovementioned lines is as follows:

Voltage Level	External Fault (Hours)	Own Fault (Hours)	Maintenance (Hours)	Total (Hours)
33 kV	5.18	0.19	3.39	8.76
60 kV	59.71	3.98	53.68	117.37
138 kV	6.99	11.99	37.89	56.87
220 kV	0	0	0	0
Total	71.88	16.16	94.96	183

At the request of El Molle Verde S.A. (EMV) the feasibility study was conducted for the supply of electricity to the Trapiche Project. The results indicated that the connection point to the National Grid System (SEIN) would be at the Cotaruse Substation, via a 220 kV transmission line to the future Trapiche 220/22.9 kV substation.

At the request of Compañía de Minas Buenaventura S.A.A. (BVN) the definitive study was completed for the “Chilota Substation - San Gabriel Substation 220 kV Transmission Line” Project, which will supply electricity for the future operation of the San Gabriel Project. Area use negotiations were also concluded for the output bays in the Redesur and Anglo-American Chilota substation.

In terms of hydroelectric power plants, Empresa de Generación Huanza has continued to improve its facilities and electromechanical equipment, obtaining a generator availability of over 93% and generating 396.466 GWh.

The Huapa and Ingenio small hydroelectric plants generated a total of 12.268 GWh over the course of the year, to the benefit of Buenaventura’s operations.

Empresa de Generación Huanza has begun studies in search of renewable power sources to supply Buenaventura’s future projects, such as hydroelectric and photovoltaic power plants, both in the central part of the country and in the south, generally near its projects.

The consolidated economic results of Consorcio Energético de Huancavelica reported total operating revenue of USD 59.69 M, operating profit of USD 36.197 M, and net results, after income taxes, of USD 29.854 M.

Procesadora Industrial Río Seco S.A. (100% BVN)

Procesadora Industrial Río Seco is a Peruvian company engaged in the production of manganese sulfide from lead-silver-manganese concentrates from the Uchucchacua Unit. Río Seco is located in Huaral, in the northern part of the department of Lima, 102 kilometers from the city of Lima.

In 2019, the Acid Washing Plant processed 32,409 DMT of concentrate from the Uchucchacua Unit, with grades of 67.2 oz/t of silver, 11.5% lead, and 23.3% manganese. The acid washing operations achieve a concentrate with a higher silver grade and lower manganese content. The following table shows the results before and after acid washing:

Concentrate	TMS	Ag Oz/TMS	Pb %	Mn %
Uchucchacua Concentrate	32,409	67.2	11.5	23.3
Río Seco Concentrate	20,692	104.7	18.0	3.8

The Sulfuric Acid Plant produced 18,463 MT of sulfuric acid with a purity of 98%. The plant uses wet sulfuric acid (WSA) technology, which is clean and environmentally friendly. 49.7% of the acid was produced from elemental sulfur, and 50.3% was produced from acid gas, which comes from the Acid Washing Plant.

The Crystallization Plant produced 21,795 MT of manganese sulfate monohydrate with two dryers. The distribution of production by dryer is shown in the following table:

Manganese Sulfate Monohydrate	TM
Spray Dryer	7,549
Spin Flash Dryer	14,246
Total	21,795

Buenaventura’s Research and Technological Innovation Center operates at the Río Seco facilities. This center has a pilot plant where research is being performed to develop an industrial process for cathodic copper production from copper concentrates with enargite from El Brocal.

Currently, an audit is being performed on the BVN Process to confirm the operating conditions and optimization of the industrial process prior to the start of the feasibility engineering.

Río Seco uses the highest safety and environmental standards, in constant coordination with the communities of Huaral and Sayán, the Lachay National Reserve, and the Municipalities of Huaral and Chancay, with which it conducts the participatory environmental monitoring program in the area.

SAFETY

At Buenaventura, we believe that safety is a part of every process, not something separate. This means that safety management is the responsibility of the operating officer in charge of each process. Safety is part of our quality indicators, and a cross-cutting aspect throughout the entire company.

In 2019, the Accident Rate Index dropped to 1.61, 15% lower than in 2018 (1.90). Unfortunately, two fatal accidents were reported at the Uchucchacua and El Brocal mining units, compared to three such accidents in 2018. These results require us to continue making efforts and allocating resources to prevent accidents based on a critical risk management approach.

Our main activities were as follows:

- ▶ Closer relations with 14 unions through awareness raising sessions called “Interiorizing Commitments for Life.”
- ▶ Strengthening of team members from Buenaventura and contractors through the “A Pact for Life” program with a focus on personal commitment.
- ▶ Structuring of the “Critical Risk Management” initiative, focused on the prevention of fatal accidents and those causing permanent disability.
- ▶ Involvement of supervisors, team members, and unions through a “participatory safety” approach.
- ▶ Training for Buenaventura’s supervision line in the Leadership Program and the ICAM accident investigation methodology.

We continue to work to achieve a culture of safety that involves all of the team members of the Buenaventura family.

ENVIRONMENTAL MANAGEMENT

This year, the Company continued to carry out its activities with the goal of achieving the environmental sustainability of its operations. Its performance was based on appropriate operational monitoring and control, with a primarily preventive focus to minimize impacts on the environment; achieve the appropriate management of water resources, monitoring its quality and fostering the reuse and recirculation of water to our processes; reduce the disposal of barren material and waste through recycling; and prioritizing progressive closure when undertaking mine closure works.

Over the course of the year, work was done on 74 environmental instruments, of which 22 were approved, 22 are still under review, and 30 are still being drafted. We began developing important environmental impact assessments, such as those for the Trapiche Project, Río Seco Cobre, and Yumpag, as well as amendments to the environmental impact assessments for Julcani, Tambomayo, and Tantahuatay, property of Compañía Minera Coimolache. The supporting technical reports (ITs) that enable the execution of low-impact components have been the most frequent instruments, with a total of 25. Detailed environmental plans (PAD) were also prepared this year, through which we have adapted to the environmental regulations issued by the Ministry of Energy and Mines (MINEM) that will allow for the inclusion of existing components in a new environmental instrument.

We recertified the Buenaventura Integrated Management System (SIB). The environmental facet of this system is based on ISO 14001 international standards. Elsewhere, with the goal of increasing the level of involvement in environmental processes, the Environmental Performance Index (IDA) was applied, determining a compliance level of 92% for different areas regarding commitments and action plans resulting from inspection findings, audits, and supervision activities; training plans; and the quality of resources intervened, among other aspects.

Water is a strategic input for different economic sectors, especially mining. Accordingly, our operations made an effort to ensure the efficient use of water resources, fostering the recirculation and reuse of water generated in the metallurgical process, achieving a rate of 94% in open-pit operations and 84% in underground operations. The water consumption rate compared to the quantity of ore processed was 0.02 m³/MT in open-pit mines and 1.64 m³/MT in underground mines.

This year, we obtained 40 permits for water use: 19 treatment system authorizations (8 for industrial dumping, 8 for domestic dumping, and 3 for drinking water treatment systems) 5 water use rights, 9 authorizations for the execution of minor works (hydraulic infrastructure, flood control, watercourse cleanup); and 7 authorizations for hydrogeological studies.

40 PERMITS WERE OBTAINED FOR WATER RESOURCES

We continued to bolster our participation, promotion, and dissemination of the results of the participatory water quality monitoring activities in the areas surrounding our operations. A total of 36 activities were undertaken, with the participation of municipal and community authorities. These actions foster greater trust in our environmental performance, as well as serving as spaces for building local capacities and strengthening environmental management with a shared responsibility approach.

This year, the Environmental Assessment and Oversight Agency (OEFA) performed 32 supervisory processes in the different units and projects, identifying 62 findings, with a rate of 1.9 finding/PENvisit. This year, they placed particular emphasis on the mine closure works. Cumulative environmental contingencies as of 2019 total PEN 5.81 M.

We continued promoting mine closure works, particularly progressive closure and post-closure works. Unfortunately, a significant number of our closure

works were affected by the presence of illegal and informal mining. We have

reported this situation to the authorities, but have received no response. On the contrary, we have been forced to remedy these issues ourselves

As of December 31, 2019, the provision for mine closure, comprising not only units but exploration projects and environmental liabilities (including La Zanja and Coimolache) totaled USD 302 M. The works executed during the year totaled USD 12 M, mainly including rehabilitation and revegetation works. It is important to note that following a long post-closure period (10 years) the General Directorate of Mining-Related Environmental Affairs of the Ministry of Energy and Mines granted Final Closure Certification to the Rumimaqui Rifle environmental liability (Huancavelica) making it the first to be awarded nationwide. We have also continued developing the project for improved soils known as "Tecnosoles" at La Zanja, with the goal of validating a technology that guarantees the adequate rehabilitation of intervened areas, while also helping to reduce the water volumes requiring treatment.

SOCIAL MANAGEMENT

At Buenaventura, we firmly believe that mining is an essential driver of the country's development and decentralization. Above all, it can generate progress in the communities near our different operations and projects.

We believe this positive impact is possible through a joint effort among enterprise, the community, and authorities. If we join forces in pursuing a common objective, together we will achieve sustainable development for all.

Based on this principle, we at Buenaventura perform our mining activities based on these four pillars:

1. Engage in and maintain relationships based on respect and trust with the communities inside the area of our projects and operations.
2. Always strive for sustainable development, with a view to shared social responsibility. Under this vision, all actors act as one.
3. Always bear in mind the need to care for the environment and water.
4. Always give the highest priority to our occupational health and safety policies in our activities.

In view of our first pillar, we actively participate in community life and development by joining forces with them, while respecting their traditions and customs. This helps forge bonds of trust that will ensure the sustainability of social investment projects. In compliance with this objective, we have participated in 336 social and cultural activities held by our neighboring communities and organized 331 activities together with them.

On a related note, in accordance with our transparency and open door policy, we focus on always maintaining direct communications so that we can share and fully explain the work we have done and clear up any doubts that the public may have. Using the rapport-building spaces that we create through our Permanent Information Offices, we have carried out 391 communications activities, including door-to-door visits, workshops, guided visits, and more.

We seek to promote the sustainable development of our communities by helping to foster a dynamic economy based through improved employability and local entrepreneurship. As a result of these efforts, 63% of our team members come from the regions where we operate, and local businesspeople have billed Buenaventura a total of 117 million soles for the provision of services and the sale of goods to our units.

To improve local production, we also work to strengthen traditional activities and market their products with the execution of the Buenaventura PRA in Lima, Pasco, Arequipa, Moquegua, and Huancavelica, and the Productive Development Projects in Cajamarca. Thanks to this effort, local producers achieved over 10 million soles in sales in 2019, for a total of nearly 45 million soles in sales since 2014.

Our concern with improving the population's quality of life in our areas of influence has led us to execute infrastructure projects, mainly in the form of tax-deductible works. In 2019, we delivered works such as pavement and sidewalks in the Puente Piedra neighborhood of Oyón (Lima) and the expansion and improvement of the Morán Pata SAP in Hualgayoc (Cajamarca). During the same period, we managed to leverage 22.7 million soles for the performance of water and sanitation projects in the village of Gordillos, in the district of Catilluc (Cajamarca) and the district of Ccochaccasa (Huancavelica); pavement and sidewalks in the district of Antabamba (Apurímac) in the populated center of Nuevo Smelter, district of Tinyahuarco, and in the neighborhood of

Uliachin, district of Chaupimarca (Pasco); and sprinkler irrigation in the populated center of Ruiz Señor, district of Catilluc (Cajamarca).

At the same time, Buenaventura has also demonstrated our concern for education and health in the country's most isolated areas, carrying out different projects such as "Aprender para Crecer" and "Enseña Perú." Through these projects, we seek to build teachers' capacities and develop skills among primary and secondary school students. These projects also include the Comprehensive Scholarship Program in Uchucchacua, Orcopampa, La Zanja, Julcani, and San Gabriel; as well as support for local institutions of higher education.

In light of the foregoing, these pages will provide a detailed report on the activities we performed in 2019. Over the course of the year, we reaffirmed our commitment to continuing to work toward sustainability, as always within a framework of safety, respect for communities, and care of the environment. Our goal is to promote the sustainable development of our areas of influence and our country.

ECONOMIC AND FINANCIAL REPORT

The Company's net loss for fiscal year 2019 was USD 28.5 million, compared to a net loss of USD 11.7 million in fiscal year 2018. This difference was due mainly to a drop in net sales resulting from lower volume (USD -322 M) counteracted by higher prices (USD +37 M) a lower cost of sales (USD 100 M) lower exploration expenditures in the operating units (USD 46 M) revenue from affiliates (USD 49 M) and deferred tax revenue (USD 48 M).

On a consolidated basis, the metal that accounted for the highest percentage of our sales in terms of value in 2019 was gold, with 29%, followed by silver with 25%, then copper with 23%, zinc with 15%, and lead with 9%.

The net debt-to-EBITDA ratio closed out the year at 2.06x.

During 2019, the final cash position fell from USD 369 to USD 210 million, and the total CAPEX for the year was USD 103 M.

As of December 31, 2019, we had 989 common shareholders. Of these, 22.4% are shareholders domiciled in Peru, while 77.56% are not.

We also had 886 shareholders with investment shares.

The ADR program on the New York Stock Exchange (NYSE) reached a trade volume of USD 4,606,152,048 in 2019 (295,266,641 ADSs).

As of December 31, 2019, the number of outstanding ADSs was 212,545,083, which represents 77.32% of the Company's total outstanding shares.

WITH **29%**, GOLD WAS THE METAL THAT ACCOUNTED FOR THE HIGHEST PERCENTAGE OF OUR SALES IN TERMS OF

MANAGEMENT'S ANALYSIS AND DISCUSSION

The main changes in the consolidated financial statements for the twelve-month periods ended December 31, 2019 and 2018, are explained below:

(Figures in U.S. dollars are expressed in thousands, except for metal prices and quantities)

Net Sales

In fiscal year 2019, net sales of goods totaled USD 821,930, compared to sales of USD 1,106,329 in fiscal year 2018, representing a decrease of 26%. This change is mainly due to the following factors:

a. Gold Sales

The average sale price of this metal rose from USD1,267.99/oz in 2018 to USD 1,405.35/oz in 2019, or 11% higher. However, the volume of gold sales was 143,949 oz less than in 2018. The combined effect resulted in sales that were USD 157,683 lower in 2019 than in 2018. The lower revenue corresponds primarily to the net effect of the decrease in sales at the Orcopampa and La Zanja Units, by USD 90,355 and USD 50,659, respectively, as a consequence of the decrease in volumes sold.

b. Silver Sales

The average sale price of this metal rose from USD 15.08/oz from 2018 to USD 16.36/oz in 2019, an increase of 8% in the price. However, silver sales were 5,781,657 oz lower than in 2018. The combined effect led to sales that were USD 63,951 in 2019 than in 2018. The lower revenue was the result of the net effect of the drop in sales from the Uchucchacua and Tambomayo Mining Units by USD 58,130 and USD 15,997, respectively, as a consequence of the lower volumes sold, partially offset by the increase at the Colquijirca Unit of USD 11,856 due to the increase in volumes sold and average prices negotiated.

c. Zinc Sales

The average sale price of this metal fell from USD 2,680.81/MT in 2018 to USD 2,490.60/MT in 2019, representing a 7% decrease in price. However, 1,471 fewer MT of zinc were sold compared to 2018. The combined effect was USD15,349 less in sales revenue in 2019 than in 2018.

The lower revenue was the effect of the drop in sales from the Colquijirca and Uchucchacua Mining Units by USD 9,968 and USD 7,051, respectively, as a consequence of the decrease in volumes and average negotiated prices, partially offset by the increase in sales from the Tambomayo Mining Unit by USD 1,670, as a consequence of the higher volumes sold.

d. Copper Sales

The average sale price of this metal fell from USD 6,277.40/MT in 2018 to USD 5,808.47/MT in 2019, representing a drop of 7% in price. Additionally, 2,743 fewer MT of copper were sold compared to 2018. The combined effect was USD 36,457 less in sales revenue in 2019 than 2018. The drop in revenue was mainly due to sales from the Colquijirca Unit that were USD36,629 lower, primarily as a result of volumes sold and average negotiated prices.

e. Deductions

During 2019, deductions applied for maquila (tolling) and penalties on concentrate sales jointly totaled USD 220,306, compared to USD 192,684 in 2018. These amounts have been deducted from the total net sales in each year.

f. Sales of Services

In fiscal year 2019, net sales for services totaled USD 23,661, compared to sales of USD 24,001 in fiscal year 2018, representing a drop of 1%.

Operating Costs

In 2019, operating costs totaled USD 799,582, compared to USD 967,696 for 2018, representing a decrease of 17%. This drop was mainly due to the following line items:

a. Cost of Sale of Goods, Not Including Depreciation or Amortization

The “Cost of Sale of Goods, Not Including Depreciation or Amortization” item fell by USD 100,507, from USD 613,381 in 2018 to USD 512,875 in 2019, representing a decrease of 16%. The drop in cost of sales is due mainly to the production in the Orcopampa and La Zanja Units, which was USD 42,267 and USD 29,042 lower, respectively; as well as a drop of USD 23,294 in the Uchucchacua Unit as a result of lower production and sales caused by the 22-day halt that occurred in 2019.

b. Depreciation and Amortization

The “Depreciation and Amortization” item dropped by USD 12,544, going from USD 238,879 in 2018 to USD 226,335 in 2019, representing a decrease of 5%. This decrease occurred mainly due to the net effect of: (i) a drop of USD 24,985 at the La Zanja Mining Unit as a result of the increase in the life of mine and the lower depreciable base; partially offset by (ii) increases of USD 6,669 and USD 6,628 at the Colquijirca and Tambomayo Mining Units, respectively.

c. Exploration in Operating Units

The “Exploration in Operating Units” fell by USD 45,567, going from USD 89,730 in 2018 to USD 44,163 in 2019, due primarily to the decrease in exploration in the Orcopampa, Uchucchacua, and Tambomayo Units by USD 20,523, USD 11,980, and USD 8,940, respectively.

d. Mining Royalties

The “Mining Royalties” item fell by USD 8,556, going from USD 21,388 in 2018 to USD 12,832 in 2019 as a result of the lower sales during 2019.

Operating Expenditures

Operating expenditures remained similar to the previous year, going from USD 124,721 in 2018 to USD 126,319 in 2019, making for an increase of 1%. This increase was mainly caused by the net effect of: (i) lower exploration expenditures in no-operating areas, by USD 24,428; (ii) USD 33,735 less in revenue from the insurance recovery in 2018 involving the El Brocal subsidiary; partially offset by (iii) lower expenses for the contingencies provision by USD 8,280 as a result of a decrease in revenues from USD 11,248 in 2018 compared to USD 2,968 in 2019; iv) expenses of USD 2,083 for the long-term asset deterioration provision for the Julcani Mining Unit in 2019 compared to a recovery of the USD 5,693 provision in 2018 from the La Zanja subsidiary.

Other Revenue (Expenditures) Net

“Other Revenue (Expenditures) Net” rose by USD 45,743, going from a loss of USD 31,265 in 2018 to a gain of USD 14,478 in 2019. This change is due to the net share in the results of related companies. This item represented a loss of USD 1,144 in 2018, compared to a gain of USD 47,710 in 2019. This increase is primarily the result of the net effect of the net earnings of Sociedad Minera Cerro Verde S.A.A., which were USD 53,007 higher, and Compañía Minera Coimolache S. A., which were USD 1,889 higher, partially offset by a net loss by Minera Yanacocha S.R.L., which was USD 5,998 more than the previous year.

Income Tax Provision

This item consists of “Income Tax” and “Mining Royalties and Special Mining Tax.”

a. Income Tax

This item went from an expenditure of USD 22,462 in 2018 to a revenue of USD 25,766 in 2019.

b. Mining Royalties and Special Mining Tax

This item went from an expenditure of USD 4,417 in 2018 to an expenditure of USD 176 in 2019.

Non-Controlling Interest

This item registered a loss of USD16,251 in 2019, compared to a gain of USD 1,791 in 2018. This change was mainly due to the decrease in the non-controlling results of the El Brocal subsidiary (profit of USD 2,880 in 2018 compared to a loss of USD 13,432 in 2019).

SUMMARY OF OPERATIONS

FINANCIAL STATEMENTS

Paredes, Burga & Asociados
Sociedad Civil de Responsabilidad Limitada

Building a better working world

Independent Auditors' Opinion

To the Board of Directors and Shareholders of Compañía de Minas Buenaventura S.A.A.

We have audited the attached consolidated financial statements of Compañía de Minas Buenaventura S.A.A. (a Peruvian publicly traded corporation) and Subsidiaries (hereinafter, "the Group") which comprise the consolidated balance sheet as at December 31, 2019 and 2018, and the corresponding consolidated statements of income, comprehensive income, changes in equity, and cash flows for the years ended December 31, 2019, 2018, and 2017, and the summary of significant accounting policies and other explanatory notes.

Management's liability for the consolidated financial statements

The Management is responsible for the reasonable preparation and presentation of these consolidated financial statements in accordance with the International Financial Reporting Standards issued by the International Accounting Standards Board (IASB) and all internal controls deemed necessary by the Management to permit the preparation of consolidated financial statements free of material mistakes, whether due to fraud or error.

Auditor's liability

Our responsibility is to express an opinion on these consolidated financial statements based on our audit. Our audit was performed in accordance with International Standards on Auditing approved for application in Peru by the Governing Board of the Peruvian Public Accountants' Association. Such standards require us to comply with ethical requirements, and to plan and conduct the audit to achieve reasonable certainty that the consolidated financial statements are free of material mistakes. An audit comprises the application of procedures to obtain auditing evidence for the amounts and information disclosed in the consolidated financial statements. The procedures selected depend on the professional judgment of the auditor, including the assessment of risks of material mistakes in the consolidated financial statements, whether due to fraud or error. When performing this risk assessment, the auditor takes into account the relevant internal controls of the Group for the reasonable preparation and presentation of the consolidated financial statements, in order to design audit procedures in accordance with the circumstances, but not with the purpose of expressing an opinion regarding the effectiveness of the Group's internal controls. An audit also includes an evaluation of whether or not the accounting principles applied are appropriate, and if the accounting estimates performed by the Management are reasonable, as well as an evaluation of the general presentation of the consolidated financial statements.

Building a better working world

Independent Auditors' Opinion (continued)

We believe that the audit evidence we have obtained is sufficient and appropriate to provide us with a basis for our audit opinion.

Opinion

In our opinion, the attached consolidated financial statements reasonably present, in all material aspects, the financial situation of Compañía de Minas Buenaventura S.A.A. and Subsidiaries as at December 31, 2019 and 2018, as well as its financial performance and its consolidated cash flows for the years ended December 31, 2019, 2018, and 2017, in accordance with the International Financial Reporting Standards issued by the International Accounting Standards Board (IASB).

BACKGROUND OF BOARD MEMBERS AND MANAGEMENT

Roque Benavides - Chairman of the Board

Mr. Benavides graduated with a degree in civil engineering from the Pontificia Universidad Católica del Perú (PUCP). He holds a Master of Business Administration from the Henley Business School at the University of Reading in the U.K. He completed the Management Development Program at the Harvard Business School and the Advanced Management Programme at Oxford University. He has worked at Buenaventura for 40 years as a Project Engineer, CFO, and CEO until 2017. He sits on the board of nine related companies, as well as the Banco de Crédito del Perú and UNACEM. He was previously president of the Peruvian Confederation of Private Business Institutions (CONFIEP) for two separate terms, the last of which concluded in 2019. He was also previously the president of the Peruvian Society of Mining, Petroleum, and Energy (SNMPE).

Felipe Ortiz de Zevallos - Director

Mr. Ortiz de Zevallos graduated with a degree in industrial engineering from the UNI, and holds a MSc in Business Administration from the University of Rochester. He is a graduate of the OPM Program at Harvard Business School. In addition to a range of professional, academic, and business activities, he is the founder and president of the APOYO Group, created in 1977. He was previously rector of Universidad del Pacífico (2004-2006) and Peruvian Ambassador to the United States from September 2006 to March 2009.

José Miguel Morales - Director

Attorney at law graduated from the Pontificia Universidad Católica del Perú (PUCP). Mr. Morales completed the Sloan Program at the Stanford University School of Business. He has been a senior attorney at the Company since 1970, and served as general counsel from 1993 to 2010. He has been a Senior Partner at the Estudio Aurelio García Sayán law firm since 2007, and has worked for the firm since 1965. He sits on the board of five related companies and several other companies not engaged in mining activities. He was previously the president of the Institute of Mining and Oil Law, the Peruvian Society of Mining, Energy, and Petroleum (SNMPE) and the CONFIEP. He is currently president of the Entrepreneurs for Education Association.

Germán Suárez - Director

Economist graduated from the UNMSM with a Master's Degree in Economics from Columbia University. Mr. Suárez was previously Chairman of the Board of the Peruvian Central Reserve Bank from April 1992 to September 2001, where he has spent most of his professional career since 1964. He was president of Banco de la Nación (1990-1992) as well as holding various positions in the Ministry of Economy and Finance (1981-1985) and the International Monetary Fund (1978-1980). He sits on the board of several companies, and is a governor to the IMF and IADB. He chaired the G-24 for IMF and World Bank affairs.

William Champion - Director

Mr. Champion holds a Bachelor's Degree in Chemical Engineering and Biology from the University of Arizona. He has been a board member since January 2016. He is also a director of Gladiator Mining Group LLC, a private mining investment company based in the United States. He has over 40 years of executive, management, and operating experience in the mining sector. He worked at Rio Tinto PLC from 2002 to 2014 in different positions and was managing director of Río Tinto Coal Australia; managing director of Río Tinto Diamonds; and chairman and CEO of Kennecott Utah Copper. He also worked for Phelps Dodge Mining Company from 1984 to 1995, where he held a number of positions (President of Phelps Dodge Chile).

Diego de la Torre - Director

Mr. De la Torre holds a Bachelor's Degree in Business Administration from the Universidad del Pacífico in Lima and an MBA from the London Business School in England. He is the cofounder and Chairman of the Board of La Viga and Quikrete Perú. He is also a member of the advisory council of the David Rockefeller Center for Latin American Studies at Harvard University, and writes a column on the economy for the newspaper El Comercio. He was a professor at the Universidad del Pacífico for twelve years, and has been a board member at many important companies and institutions, including Endeavor Perú, IPAE, and Perú 2021. Since 2005, he has been the President of the United Nations Global Compact Network in Peru. In 2013, he received the "Complete Businessperson" award from the Latin American Business Council (CEAL). Additionally, in 2015, he was selected as one of the Top 100 Leaders by AACSB International. He has been a board member of Buenaventura since 2017.

Nicole Bernex - Director

Ms. Bernex has been a board member at BVN since January 2018. She holds a PhD in Geography (1975) and a Master's Degree in Geography (1971) from Université Paul Valéry in Montpellier, France. She has been a professor in the Humanities Department of the Pontificia Universidad Católica del Perú (PUCP) since 1984, and was the Academic Director of the Center for Research in Applied Geography at the same university from 1984 to 2018. She has been the Chairwoman of the Board of the Instituto Científico del Agua since 2018, president of the Lima Geographic Society since July 2016, and is a board member of 2030 Water Resource Group Peru. She was a member of the Global Technical Committee (2014-2017) of the Global Water Partnership and is president emerita of Global Water Partnership Perú. Vice president of the National Academy of Sciences. She was also previously the director for Latin America and the Caribbean of the Scientific Committee of the United Nations Convention to Combat Desertification; the coordinator of a number of research programs; and a consultant to different international agencies (PAS-WB, UNDP, FAO, and others). She has over 150 publications to her name.

Víctor Gobitz - General Manager

CEO and General Manager of Buenaventura since January 2017. Mr. Gobitz has also been a board member of Sociedad Minera El Brocal S.A.A. and Sociedad Minera Cerro Verde since that same year. Previously, he was CEO of Compañía Minera Milpo (now Nexa Resources Peru) from 2013 to 2016; General Manager and Director at Río Alto Mining (now Panamerican Silver); General Manager and Director at Castrovirreyna Compañía Minera; Operations Manager at Sociedad Minera El Brocal S.A.A.; and Assistant General Manager and Director at Volcan Compañía Minera. He has over 25 years of experience in operations and mining projects management. He graduated from the PUCP (1986) and obtained his MBA from ESAN Business School (1998) as well as pursuing specialized studies at the University of Pennsylvania's Wharton School (2005) and the Kellogg School of Management (2015).

He is currently the director of GERENS Business School and a professor at the Pontificia Universidad Católica del Perú (PUCP).

Leandro García - Vice President of Finance and Administration

Mr. García holds a Bachelor's Degree in Business Administration from the Universidad del Pacífico, a Bachelor's Degree in Accounting from the same university, and Master of Business Administration from the University of Miami in Florida. He completed the Advanced Management Program at Harvard Business School in 2017. He worked at Buenaventura from 1990 to 1997, where he held the position of Head of Treasury. He also worked at Sociedad Minera El Brocal S.A.A. as Finance Manager until 2000. He was General Manager of Boticas BTL until 2005, and General Manager of Boticas Inkafarma until June 2011. He rejoined Buenaventura as Controller General in July 2011 and became Vice President of Finance and Administration in December 2017. He sat on the board of Química Suiza Retail, the business that manages the MiFarma pharmacy chain, from January 2016 to January 2018. He is the general manager of Consorcio Energético de Huancavelica and a director of Sociedad Minera El Brocal S.A.A., Compañía Minera Condesa, and Empresa de Generación Huanza.

Juan Carlos Ortiz - Vice President of Operations

Mr. Ortiz graduated with a degree in mining engineering from the Pontificia Universidad Católica del Perú in 1992, and holds a Master's Degree in Engineering from Pennsylvania State University in the United States, with a focus on mining engineering management. Before joining Buenaventura, he was Chief Technical Officer at Volcan Compañía Minera,

a polymetallic mining company and one of the largest zinc, lead, and silver producers in the world. He was also previously Chief Operating Officer at Compañía Minera Milpo (now part of Nexa Resources Group), where he was in charge of the operations at Cerro Lindo, Atacocha, and El Porvenir. Over the course of his career, he has held different operations and project management positions throughout Latin America. Currently, he is the director of the Peruvian Institute of Mining Engineers.

Raúl Benavides - Vice President of Business Development

Mr. Benavides graduated with a Bachelor's Degree in Mining Engineering from the University of Missouri at Rolla. He holds a Master's Degree in Mining Administration from Pennsylvania State University and completed the Advanced Management Program at Harvard Business School (AMP-160). He has served as president of the Peruvian Institute of Mining Engineers (IIMP) as well as being the founder and president of the Mining Safety Institute (ISEM). He is currently the President of the vocational mining school CETEMIN. He has worked at Buenaventura since 1980, and is a director of eleven related companies.

Alejandro Hermoza - Vice President of Sustainability

Mr. Hermoza graduated with a degree in mechanical engineering from the University of Maryland, and holds a Master's Degree in Engineering from the same university, as well as a Master's in Business Administration from the Universidad de Ciencias Aplicadas (UPC). He previously worked as Development Manager of the Peruvian Confederation of Private Business Institutions (CONFIEP) and has worked at Buenaventura since 2003, where he has held the position of Community Relations Manager from 2008 to 2011 and Deputy Manager of Administration and Human Resources from 2003 to 2008; and Vice President of Sustainability from 2008 to date. He has been an alternate member of the Executive Committee at Yanacocha since 2014. In 2011, he graduated from the Advanced Management Program (AMP) at Harvard Business School.

BUENAVENTURA
