## Mining Methods

## Skyline

Skyline is an underground longwall mining complex that began production in 1981. The mining complex is located in Carbon County, UT approximately 5 miles southwest of Scofield, UT and approximately 30 miles northwest of Price, UT. The Skyline mine lies at a high elevation in the northern end of the Wasatch Plateau coalfield. Skyline has longwall and continuous miner reserves where it produces high-BTU, low-sulfur, compliance thermal coal.

Proximate Analysis (As-Received)	Ultimate Analysis (As-Received)	Ash Fusion Temperature	Ash Mineral Analysis (%)	
Moisture	10.00%Moisture	10.00%Reducing:	Silica (SiO2)	59.70%
Ash	10.00%Carbon	63.00%I.D.	2,100Alumina (Al2O3)	13.10%
Volatile Matter	39.20%Hydrogen	4.60% H = W	2,120Titania (TiO2)	0.70%
