Millmerran Power Management operates the Millmerran power station and coal mine for its parent company, InterGen.

Millmerran Power is a two-unit generating station located near the town of Millmerran in south-west Queensland. The company says it is among the most energy efficient and environmentally advanced coal-fired projects in Australia.

Coal for the power station comes from the adjacent open-cut coal mine, which not only helps lower consumer electricity costs but also creates minimal environmental impact on the surrounding land.
