

Our Operations

Lubambe is a large-scale operating underground copper mine. The Mine sits on a tenement area of approximately 228km², which is part of the Konkola Musoshi Basin, located within Zambia's Copperbelt Province which hosts one of the largest copper deposits in the world. The mineralization is argillite-hosted, grading between 1.5-15% TCu and varying from 2-24m in thickness.

Lubambe has an established mineral processing plant with a capacity to process up to 2.4 Mtpa of ore. Since EMR Capital's acquisition of the 80% interest in LCM, the mine is progressively being ramped up with a target to maximise utilisation of the processing capacity of the existing plant.

Mining development is currently being undertaken by contractors while Lubambe undertakes all stoping operations.

The operation produces a high - grade concentrate averaging 46% Cu, sold under offtake agreements to smelters in Zambia.

The mine has a total workforce of approximately 1,900 FTE (*full time equivalent*) of which approximately of 1,100 are employees of LCM. The Mine is serviced by an international road from Chingola to Kasumbalesa.
