Sanbrado

CLIENT: WEST AFRICAN RESOURCES
LOCATION: OUAGADOUGOU, BURKINA FASO
BUSINESS: AMS
SERVICE: SURFACE MINING / CRUSHER FEEDING , DE-WATERING , DRILL AND BLAST , GRADE CONTROL , LOAD AND HAUL
COMMODITY: GOLD

The Sanbrado Gold Project is a low-cost, high-grade operation – one of the highest margin gold projects in West Africa. Sanbrado is located 90 km east-southeast of Ouagadougou, the capital of Burkina Faso and covers an aggregate area of 116 km².

AMS was awarded this contract late 2019 and went on to construct and fit out of the mine infrastructure, including wash bay facility and workshop fit outs. AMS commenced the open-cut mining operations, on time and on schedule. The project scope is full service open pit mining, including: establishment, site preparation, short & medium term mine planning, drill & blast, load & haul, grade control, dewatering, and mobile maintenance works.

The project currently runs with 5 main production excavators, 11 trucks, 2 graders, 2 water trucks and 4 dozers.

In its first year of production, Sanbrado is expected to produce more than 300 000 oz of gold and an average of 217 000 ozpa in its first five years and 153 000 ozpa over the current 10-year life of mine.
